

Proposed Solution Workflow

Bagisto Quick Commerce Platform

Hello Rohidas,

Greetings from the Bagisto Team!

Thank you for sharing your business requirements with us.

Based on our discussion, we have outlined our understanding of your proposed business workflow below. Kindly review and confirm if it aligns with your requirements. Upon receiving your confirmation, we will prepare the effort estimation, project timeline, and commercial quotation.

1. Project Overview

You are building a single vendor quick commerce e-commerce platform for selling books across Karnataka. The platform will be operated through one centralized administration panel, giving customers a single online storefront while using multiple physical stock locations for order fulfillment based on delivery location.

Business Model	Single Vendor eCommerce Platform
Storefront	One centralized customer-facing website
Admin Panel	One centralized administration panel
Catalog	One unified product catalog

2. Business Structure

2.1 Main Warehouse

The business will operate one primary warehouse located in Bengaluru. This warehouse serves as the central fulfillment location, processing orders that cannot be fulfilled from a nearby stock point.

Registered Office

**D-1 Lower Ground floor, Salcon Rasvillas, Saket District Centre Saket (South Delhi) New Delhi

2.2 Local Stock Points

In addition to the main warehouse, the business will maintain multiple stock points across Karnataka. These stock points are part of the same business, managed under the same administration, and used for inventory storage and order fulfillment. They are not independent sellers or separate online stores.

- Bengaluru (Main Warehouse)
- Mysuru
- Udupi
- Hubballi
- Mangaluru

Additional stock points can be added as the business expands.

2.3 Centralized Administration

The complete platform will be managed through a single Admin Panel, covering:

- Product Management – creation, updates, pricing, and images
- Category Management – creation, organization, and updates
- Inventory Management – stock records, stock locations, and availability
- Customer Management – registration, information, and order history
- Order Management – viewing, processing, and status updates

3. Customer Shopping Journey

3.1 Product Browsing

Customers visit the online store, browse and search for books, review product information, and add the required products to the shopping cart.

3.2 Delivery Information

During checkout, customers provide their delivery details. The delivery PIN Code plays a key role in determining the order fulfillment workflow and is considered as part of order processing prior to fulfillment.

3.3 Order Placement

Customers review their order, complete the checkout process, and place the order through the website.

4. Order Fulfillment Workflow

The order fulfillment process is determined by the customer's delivery PIN Code, as summarized below:

Scenario	Fulfillment Process
Scenario A: Within Stock Point Coverage	Order is fulfilled from the nearby stock point covering the customer's delivery PIN Code, enabling faster order fulfillment.
Scenario B: Outside Stock Point Coverage	Order is fulfilled from the main warehouse in Bengaluru and shipped through the regular courier process.

This workflow ensures faster fulfillment within stock point coverage areas, while customers outside the coverage area can continue to place orders without interruption.

5. Shipping & Delivery

Shipping and delivery will be handled through Blue Dart. Once an order is ready for dispatch from the relevant stock point or the main warehouse, the shipment will be booked and managed by the Admin team directly with Blue Dart, outside the platform.

The platform will focus on order and inventory management, while courier booking, tracking, and delivery coordination with Blue Dart will remain a manual process handled by your operations team.

6. Solution Approach

6.1 Core Platform

- Single Vendor eCommerce platform
- One centralized Admin Panel
- One customer-facing storefront
- Centralized product, order, customer, and inventory management

6.2 Business Workflow

- Centralized management of the complete business through a single Admin
- Management of multiple stock locations under the same business
- Consideration of the customer's delivery PIN Code during order fulfillment
- Fulfillment from the appropriate stock location based on defined business rules
- Fulfillment from the Bengaluru main warehouse for locations outside stock point coverage
- Shipping and delivery managed by your team through Blue Dart, outside the platform

7. Areas Requiring Customization

7.1 Multiple Stock Point Management

- Creation and management of multiple stock locations
- Configuration of individual stock points
- Centralized management through a single Admin Panel
- Flexibility to add or update stock points as the business expands

7.2 PIN Code-Based Serviceability

- Configuration of serviceable PIN codes
- Association of serviceable areas with individual stock points
- Management of serviceable locations through the Admin Panel

7.3 Order Fulfillment Logic

- Considering the customer's delivery location during order processing
- Identifying the appropriate fulfillment location based on configured business rules
- Processing orders from the selected fulfillment location
- Processing orders from the main warehouse when no suitable local stock point is available

7.4 Future Scalability

- Adding new stock points
- Updating serviceable areas

- Expanding operations to additional cities or states

8. Assumptions

8.1 Business Operations

- The platform will operate as a Single Vendor eCommerce solution
- The complete platform will be managed by a single Admin
- All products belong to the same business
- Customers will interact with a single online storefront

8.2 Inventory

- Inventory will be maintained across multiple physical stock locations
- The main warehouse will be located in Bengaluru
- Local stock points will be used as fulfillment locations for the same business

8.3 Shipping & Delivery

- Shipping and delivery will be managed by your team through Blue Dart, outside the platform
- The current scope does not include delivery partner or rider management within the platform
- The current scope does not include logistics management

9. Next Steps

Upon receiving your confirmation on the proposed workflow, we will:

- Finalize the implementation scope.
- Prepare the effort estimation.
- Share the estimated project timeline.
- Provide the commercial quotation for the complete implementation.

This will ensure that the proposed solution aligns with your business requirements before proceeding further.
