

CONSULTATION & REQUIREMENTS SUMMARY

Platform Evaluation: Bagisto Quick Commerce Expansion

Project Domain:	ommall.in (E-commerce / Q-Commerce Marketplace)	Consultation Date:	July 8, 2026
Developer:	Rohidas	Vendor Contact:	Sourav (Bagisto / Webkul Team)

PROJECT CONTEXT & FUNCTIONAL SCOPE

This brief outlines a platform evaluation dialogue regarding technical requirements for **ommall.in**. The client intends to launch a fast-fulfillment, PHP-based quick commerce solution centralized around bookstore retail infrastructure spanning Karnataka, India.

Core Business Architecture Individually managed corporate inventory model with physical distribution across multiple regional center storefronts (e.g., Udupi, Bengaluru). Requires hyperlocal distance routing, automatic merchant notification matching, and point-of-sale radius mapping.	Scalability & Stack Performance The target system must seamlessly catalog up to 100,000 distinct product titles. The baseline platform architecture uses a Laravel (PHP) backend engine paired with Vue.js , Tailwind CSS , and native Blade views, tested to manage over 10 million SKUs.

External Custom Developer Rates	Hourly Allocation: 2,500 INR / hour Dedicated Full-Month Developer Resource: 300,000 INR / month

OFFICIAL DIALOGUE LOG

Bagisto Team 11:04 AM	Hi Rohidas. Greetings from Bagisto team! We have received your request to check the demo of Bagisto quick commerce. You can check the demo here: https://demo.bagisto.com/commercia-retail/
Rohidas 11:05 AM	Hi. Ok. Thank you for the quick response.
Bagisto Team 11:06 AM	<i>[Image Shared]</i> Click on the Instant sandbox and your demo will be ready.
Rohidas 11:06 AM	I would like to see your quick commerce admin panel. Let me check it out.
Bagisto Team 11:06 AM	Yes, it is available inside the demo. You will be able to see that. Here is the admin panel link: https://demo.bagisto.com/commercia-retail-24052039827a82/admin/login
Rohidas 11:08 AM	Yes. I have already seen the B2C admin panel. I want to view the 'Quick Commerce' panel or options specifically.
Bagisto Team 11:12 AM	Under the configuration, you can see the "Hyperlocal" settings. From here, the admin can add the Google APIs key with a specific delivery Radius. <i>[Image Shared]</i>
Rohidas 11:13 AM	I saw it yesterday. I have enabled the hyperlocal settings via the configuration menu.
Bagisto Team 11:13 AM	At the front-end, the customer will select his location, and if it lies within the operational radius, he will be able to see the admin products. This functionality is currently available for quick commerce.
Rohidas 11:14 AM	Okay. I will check it out. Project Context: ommall.in — This client wants a new online store website featuring quick commerce capabilities and PIN-code-based delivery. That is why I am looking for a PHP-based e-commerce platform.
Bagisto Team 11:19 AM	Okay, so the client may want capabilities specific to his business needs. Our solution will be suitable for him to start with the basic functionalities. On top of that, any sort of customization can be done as you will get the complete source code. Either your team can do the customization, or you can hire our resources for the same.
Rohidas 11:21 AM	Is the entire project open source? His store is located in Bengaluru. He intends to stock his books in shops across Karnataka and sell them through quick-commerce platforms.

Bagisto Team 11:23 AM	Yes, once you purchase the solution, you will get the complete source code and can create additional custom-packages as per requirements. This multi-shop ecosystem is completely possible since the admin can create Categories, Products, etc., from the backend and set his delivery radius. From the front-end, customers can enter their location, see the listed localized products, and purchase them with already integrated payment solutions.
Rohidas 11:24 AM	Okay, which solution should I buy? Is it enough if I buy only quick commerce for my needs? Its price is \$199, excluding GST, right? Also, I am unable to select my location in the Quick Commerce front-end store. I can type, but the location marker is not appearing.
Bagisto Team 11:34 AM	I have already mentioned the existing features of the solution. On top of that, if you need any other features, that needs to be customized. Do you have your in-house development team? You can check the complete features guide here: https://webkul.com/blog/bagisto-quick-commerce-documentation/
Rohidas 11:35 AM	I have knowledge of PHP, MySQL, React, and so on. Is a test staging server required to host online to evaluate?
Bagisto Team 11:37 AM	The solution will require online hosting to go live. Either you can self-host the solution, or you can proceed with our web hosting plans (https://bagisto.com/en/cloud-hosting/). Regarding the location marker: It will function correctly once valid Google Maps API keys are entered by the system administrator.
Rohidas 11:40 AM	Can you explain more about this? Look, if there are many local centers in our state stocking books, how are we supposed to manage this through your 'Q-commerce'? If a buyer purchases a book from Udupi, the shop owner in Udupi receives a notification and delivers the book.
Bagisto Team 11:43 AM	You mean for the same admin having multiple inventory sources (warehouses)? Do you want the solution to have multiple sellers where each seller can manage their own listing and sell to the customers, just like Amazon? Can I call you now?
Rohidas 11:46 AM	It is owned by an individual, but they place their books in other local partner shops. Do you have video tutorials for the admin panel that explain how your quick commerce system works? I will contact my clients first, then we can talk. Can I contact you later on this number for queries?
Bagisto Team 11:48 AM	We do have a detailed written user guide (User Documentation Link). Sure, check all the details with your client and later we can connect to guide you with the most suitable architecture. This is our official multi-agent number. I need to have a call to understand the requirements in complete detail to guide you further.
Rohidas 11:52 AM	As for the front-end, can we create a separate custom website developed to our specific UI needs? Are the hyper-local settings in the admin panel available to check after you disconnect from this chat channel?

Bagisto Team 11:54 AM	Yes, you can do that under custom-development. The current native stack is: Backend: <i>Laravel (PHP Framework)</i> Frontend: <i>Vue.js + Tailwind CSS + Blade layout components</i> The demo is live with dynamic mock data; you can log in and test whenever you want.
Rohidas 11:56 AM	No problem, I have basic to intermediate knowledge of Laravel, and I know React and Tailwind for custom front-end development. I will contact your team after discussing this with my client. Can we create data for up to 100,000 books in the store?
Bagisto Team 12:03 PM	Yes, easily. The core solution has been stability-tested with 10 million+ SKUs and functions smoothly. Just ensure your target production environment satisfies the baseline system provisions outlined here: https://devdocs.bagisto.com/getting-started/before-you-start.html
Rohidas 12:08 PM	Ok. What are the charges on a monthly and hourly basis for hiring your developer resources?
Bagisto Team 12:10 PM	Hourly standard developer rate: 2,500 INR per hour. Dedicated developer contract (full monthly allocation): 300,000 INR / month.
